

PROJECT CASE STUDY

Mitsubishi Turbocharger

3 generations of composite air handling units

The situation

Over the last decades Mitsubishi Turbocharger has grown to become a supplier of millions of turbo compressors for the automotive industry. Because of constant expansion of their testing facilities additional ventilation air was required in 2004, 2012 and 2018. Liberty was selected every time.

Durability

This reference shows how durable the composite AHU are. Even after a period of 16 years the units remain in great shape. No signs of corrosion or deterioration visible on the in-outside. Even in this highly corrosive environment (HG Chemical plant less than 100 meters from the AHU).

Customer satisfied

The customer is very happy with the low energy- and maintenance costs of the Liberty Composite AHUs.

Besides, their low weight made it possible to position all AHUs right above the testing booths. Contact us if you would like to visit This site. this site.

Specifications

CLIENT	Mitsubishi Turbo Charcher Euope
DISTRIBUTOR	Easy Controls
APPLIED SYSTEMS	4 x Liberty composite Air Handling Units
AIR AMOUNTS (2018 delivery)	1.550 / 2.850 / 30.000 / 30.000 m3/h
