

PROJECT CASE STUDY

Holbaek Sportsby

The situation

For this Danish design multi-sport facility air handling units were required. It was important to ensure an outstanding indoor climate for the users and low maintenance and operational costs for the municipality.

The challenge

Swimming pool ventilation in a sea shore environment. Corrosion risk from inside and outside.

Weight restrictions because of centralised position on the roof of all outdoor Air handling units.

The solution

Liberty Composite AHUs with the highest ERP and EN1886 rating to ensure low operational costs.

Composite AHUs which cannot rust. All AHUs are almost 40% lower in weight compared to steel AHUs.

Specifications

CLIENT	Municipality of Holbæk
DISTRIBUTOR	DISH DK
APPLIED SYSTEMS	5x Liberty composite Air Handling Units
AIR AMOUNTS	20.300 / 21.400 / 6.200 / 5.400 / 7000 m ³ /h

LIBERTY
Composite Air Handling Units
